Неявными (пользователь не осуществляет ввод) входными данными является константный размер склада stockSize, с которого прапорщики осуществляют кражу имущества. Рассмотрим работу программы при различных значениях данного параметра.

Примечание. Стоит заметить, что в некоторых случаях вывод сообщений не поспевает за действительными основными инструкциями методов. Если интерпретировать данные сообщения, как отчёт о действиях прапорщиков, то Нечепорчук быстро считает сумму награбленного и фиксирует это в отчёте, хотя прапорщик Петров, который загружает ящики в грузовик, ещё не отчитался о данных ящиках.
